

FSM stronger linear controls: DEVELOPMENT_PASS (9/9 checks)

All 15 families and 25 instances. Fixed inherited candidate in orange; saved globally strongest reference in green.

Exposed 100/200 mV DEV; 100 observations, 128-step forecast, 12 records with correlated periods. Seed markers are not confidence intervals.
Complete requests include normalization, conditioning, forecast and output scaling. Fixed serial timing; small differences are not architectural speed gains.
No new neural updates. All controls remain visible, including failed or missing slots. No confirmation, official benchmark or novelty claim.
