

Training work and measured deployment timing

● Paired fit 1 ■ Paired fit 2 ▲ Paired fit 3 ◆ Family mean ● Anchor ● Raw endpoint ● EMA latent

Whole training run per fit

Intact controller decision time

Shared calibration: 2.217 s, charged separately. Decision timing includes trace storage; excludes row setup and native stepping.

Wall times come from a shared host. Batch amortization and equal candidate budgets do not imply isolated latency or equal compute.
