

Undoing the prescribed training-loss weights

All nine original fits plus one fixed correction each. Original training study: FAIL (18/22).

Correction fixed from FIT counts: 17,666 unmentioned retentions / 9,246 assigned retentions / 2,299 changes.

Each pair uses the same trained model. Faint lines connect paired seeds. Accuracy axes zoom to observed ranges.

Held-out services from exposed TRAIN; correct previous values supplied. No tuning, training or calibration guarantee.

Row and equal-service weighting are both shown. Saved-output arithmetic does not establish a new architecture.
