

RockSample: does full location support improve control?

256 episodes | 8 maps x 4 resets x 8 controllers | Continuation FAIL: 8/13 conditions

Each dot is one map's four-reset mean; bars mark equal-map means. No confidence intervals shown.
*References receive the map; only the last also receives qualities. Controller time includes construction, filtering and planning; excludes simulator/I/O.
Classical filters and a fixed planner only. This experiment trains no architecture and measures no biological-wiring advantage.
