

Conditional observation with the correct previous value

Primary continuation: FAIL | All 9 final fits | Privileged prior; exposed development data

- Seed 5301
- Seed 5302
- ▲ Seed 5303
- Accuracy bar: 3-fit mean
- Literal carry
- Previous-gold carry

Same query rows across seeds; points are paired initializations, not independent datasets. No rollout or architecture claim.

Fit totals include optimizer/training, validation, evaluation, checkpoint/prediction I/O and per-fit hashing.

Whole run: 489.1s through payload hashing, including shared authentication/loading and initialization; completion write is cap-checked separately.

Separate inherited cache wall: pooled 15.26s; lexical 2.27s; tokens 17.88s. Conditional metadata: 3.89s. No sum of nested scopes.
