

SYNTHETIC FIXTURE ONLY | Objective choice: overall decisions and log loss

Artificial data and rule status, not an empirical result. Continuation FAIL: 10/13 checks | Objective FAIL | Practical FAIL

Seed 6201 Seed 6202 Seed 6203 | Three-seed mean Fresh: 6 fits, 12 readouts Historical: 9 fits, 18 readouts

Primary support per seed: 578 changed + 7,241 retained = 7,819 rows. Every category and all three seeds are shown.

Axes zoom to plotted values; error axes start at zero. Historical fits are separate development references, not contemporaneous controls.

Exposed official TRAIN, correct previous value supplied. A training-objective/readout comparison, not architecture or calibration evidence.

Synthetic cost placeholders: 78.33 min whole / 100 min cap; 2.00 GiB lifetime peak RSS. Training/evaluation times remain nested, not added again.
