

OpenJev: learned square interfaces on connectome graphs

Predeclared mechanism gate: DID NOT PASS (27/40 criteria)

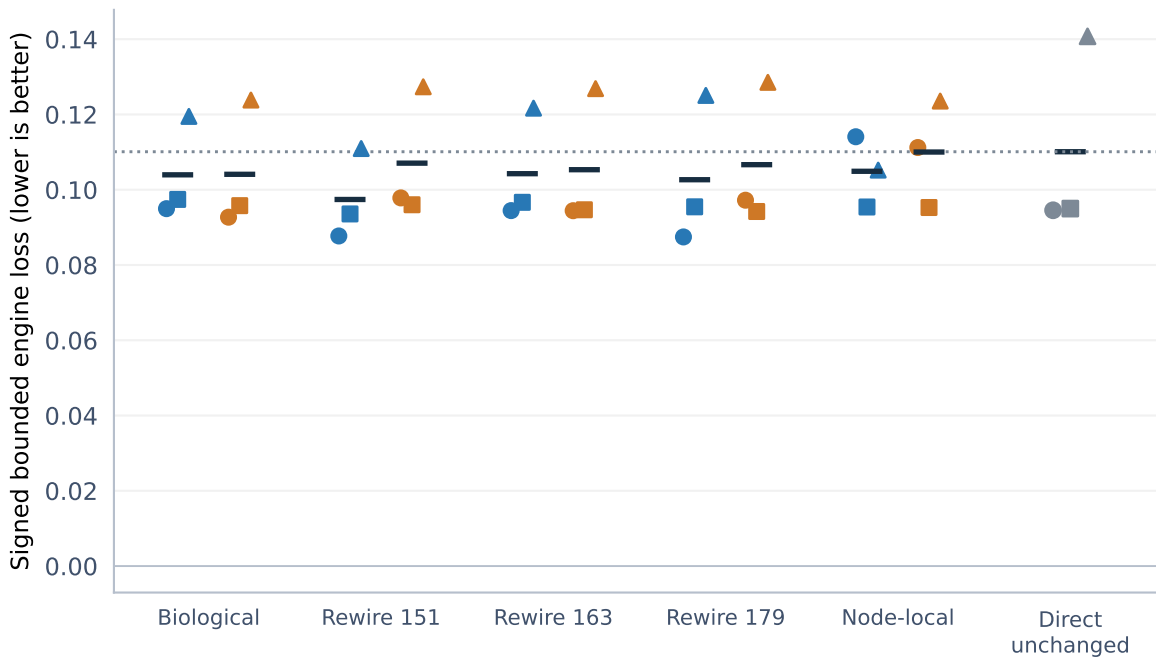

All 30 final fits and 33 evaluated models. Three paired seeds; every control retained.

● Fixed ● Learned ● Seed 97 ■ Seed 109 ▲ Seed 127 — Three-seed mean Unchanged direct mean

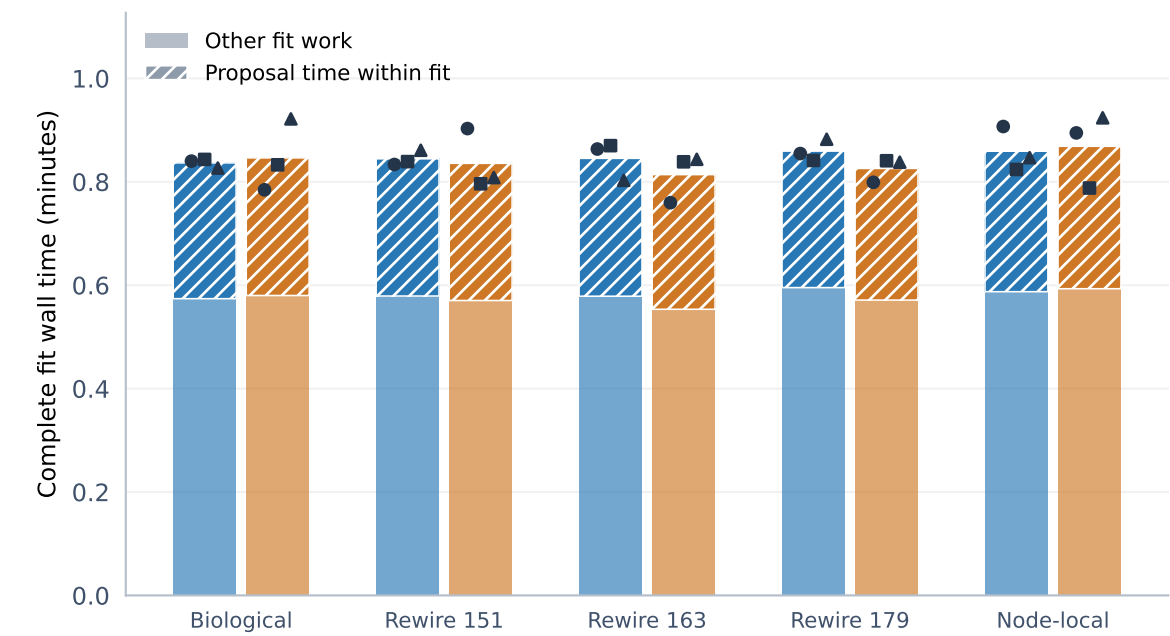

A. Ordinary panel: 128 positions

B. Scenario-shifted panel: 128 positions

C. Matched training and proposal costs

Each fit: 1,536 updates + 320 proposals (640 extra forwards).
Fixed controls pay the same proposal budget and accept none.

Engine loss = $\text{mean}[\tanh(\text{unrestricted cp}/600) - \tanh(\text{chosen cp}/600)]$, 20,000 nodes per call. Signed losses and all per-seed CP tails are retained.

Cost bars show three-seed means; points show every fit. Proposal time is already within fit time. Shared host; original pretraining and evaluation excluded.

All means are descriptive, without confidence intervals from three seeds. CP p95 values are per model/panel, never pooled or averaged into a quantile.

D. All 40 predeclared criteria (P/F)

	Ordinary	Shifted
Mean: 10% below fixed bio	F	F
Mean: 10% below R151	F	F
Mean: 10% below R163	F	F
Mean: 10% below R179	F	F
Paired: below R151, seed 97	P	P
Paired: below R151, seed 109	F	P
Paired: below R151, seed 127	P	P
Paired: below R163, seed 97	P	P
Paired: below R163, seed 109	P	F
Paired: below R163, seed 127	P	P
Paired: below R179, seed 97	P	P
Paired: below R179, seed 109	P	F
Paired: below R179, seed 127	P	P
No loss vs direct, seed 97	P	P
No loss vs direct, seed 109	P	F
No loss vs direct, seed 127	F	P
Mapping gain exceeds R151	P	P
Mapping gain exceeds R163	P	P
Mapping gain exceeds R179	P	P
Mapping gain exceeds node-local	P	P

Exposed development mechanism screen. No gameplay, Elo, intact-fly, world-model or novelty claim.
