

NL-LFR reference incomplete: diagnostic forecasts only

◆ Family mean    ○ One fit or individual seed

C100/H128, exposed 100/200 mV DEV; 12 correlated-period records. Known inputs; no future outputs.

NL-LFR includes a bounded nonlinear context solve; BLA a fresh linear state solve. All retained reference weights unchanged.

Separate-process latency is descriptive. No candidate-survival, untouched-test, novelty or controlled speed claim.
